

Your Prescription for Crystal Clear Water®

Rx Clear® Large Chemical Maintenance Pool Kit Instructions

Follow these step-by-step instructions to maintain a crystal clear pool.

1. To maintain proper water balance, it is beneficial to get in the habit of testing your pool water on a weekly basis. This kit includes Rx Clear® 4-in-1 Test Strips 50 count to get through the entire swim season.
2. Test and adjust the alkalinity level. Rx Clear® Alkalinity Increaser is not included in this kit but is a chemical that is ideal to have on hand to adjust your pool's alkalinity levels as needed. The alkalinity must stay in range for your chlorine to work at its full potential. The alkalinity level may drop when it rains, depending on the area you live. If it does, raise the alkalinity level to the 80-120ppm range.
3. Test and adjust pH to 7.2-7.6 range. Rx Clear® Swimming Pool pH Plus is not included in this kit but is a chemical that is ideal to have on hand to adjust your pool's pH level as needed. Chlorine tablets can affect your pH so to get it back in balance, add an estimated 1 lb. of pH plus for every 6 chlorine tablets used.
4. Test and adjust Stabilizer/Conditioner level to 30ppm-50ppm. This chemical (stabilizer) is used to prolong the life of your chlorine (also known as sunscreen for your chlorine). This should be raised once a season, at the beginning of the year.
5. Add 2 bags of Rx Clear® Super Shock weekly, at night, per every 30,000 gallons. Shocking the pool destroys bacteria which then leaves the free available chlorine to do its job. This will help maintain 100% free chlorine residual.
6. The morning after the shock treatment is the ideal time to add Rx Clear® Swimming Pool Algaecide 50 Plus. Add 3 oz. per 10,000 gallons weekly.
7. Add 4 jumbo chlorine tablets weekly, in either a floating dispenser or automatic chlorinator. The addition of the chlorine tablets will help eliminate bacteria.
8. Your kit also includes Rx Clear® Super Strength Clarifier. Use 4 oz. of Clarifier for up to 15,000-30,000 gallons any time you're not satisfied with the clarity of the water.
