

Your Prescription for Crystal Clear Water®

SPRING OPENING KIT

This Kit Contains:

- 4 Bags of Rx Clear® Super Shock (1 lb ea.)
- 1 Quart of Rx Clear® Pool Algaecide 50 Plus
- 4 lbs of Rx Clear® Stabilizer/Conditioner
- 1 Package of Rx Clear® 4-in-1 Test Strips

Up to 30,000 Gallons

(Chlorine Based or Compatible Pools Only)

Opening Your Pool:

Pump off any water that has accumulated on your winter cover. Remove any leaves or debris. Remove the cover, clean it off and make sure it is dry before putting it away. Connect your plumbing and filtration system. Start filling your pool. While it is filling, you may want to clean the walls at the water line. After the pool is filled, test your water. If your pH is not between 7.2 and 7.6, adjust it accordingly. With proper pH levels, you may proceed.

1. Vacuum the pool if needed.
2. Pre-dissolve 1 bag of Rx Clear® Super Shock in a bucket of warm water. Walk around the pool perimeter, sprinkling the mixture over surface of the water. Repeat with each bag of Rx Clear® Super Shock until all four bags have been added to the pool.
3. Pour 18 fl.oz. per 35,000 gallons of the Rx Clear® Swimming Pool Algaecide 50 Plus into the pool, walking it around the entire pool. Follow bottle Directions for Use for repeat and maintenance dosages.
4. When the pool has been vacuumed and the water is clear, backwash the filter.
5. You may now add the Rx Clear® Stabilizer/Conditioner according to the package directions. Pour directly into the skimmer or pre-mix in a bucket of warm water, then pour into the skimmer. Do not backwash for at least 3 to 4 days to allow time for the stabilizer to dissolve.
6. Test the water regularly using Rx Clear® 4-in-1 Test strips provided.
