

Complete Plumbing Kit With Main Drain

Now is the time to upgrade your plumbing hookup. Eliminate the need to drain your pool for the winter with the NEW Aquador System. Our complete package includes a Hayward thru-wall skimmer, 4 way ball valve, main drain, Aquador, return fittings, plugs, hose adapters, clamps, 50' flexible PVC and instructions. All you need to update your system.

Step 1: Locate center of pool and install center drains minimum of three feet apart.

Step 2: Dig trench 4" to 6" deep. Trench should lead out and under bottom channel of pool to the area of where filter will set.

Step 3: Connect hose to fittings and bottom main drains, using teflon tape on all threads. Clamps should grip on the ridged portion of fittings.

Step 4: Before packing trench with dirt (do not use sand) tape over main drain openings and screw holes so not to get dirt or sand into screw holes.

Step 5: Leave hose at least 6" long on outside pool wall for hooking upto filter. (This may need to be longer. Check with local codes).

Step 6: Drain opening should end up being flush with level of sand in bottom of pool.
