

# Aboveground Pool Manual Diverter System

(kit#SK-35)

- 1) Use the basic configuration as shown at right.
- 2) For flex hose, use adapters provided. For rigid PVC pipe, purchase teflon tape glue and four 1 1/2" MPTxSOC where you purchase your PVC pipe.
- 3) Turn the handle perpendicular to close the valve. By closing the valve, water is forced through the solar heater, sending heat to your pool.
- 4) Turn the handle parallel to open the valve. By opening the valve, water will follow the path of least resistance back to your pool, not through the solar heater.

## Manual Diverter using rigid PVC pipe

## Diverter with flex hose adapters (provided)
