

LAVA®

Illuminate Your Mood™

CANDLE LIGHT LAVA® LAMP USER CARE & MAINTENANCE GUIDE

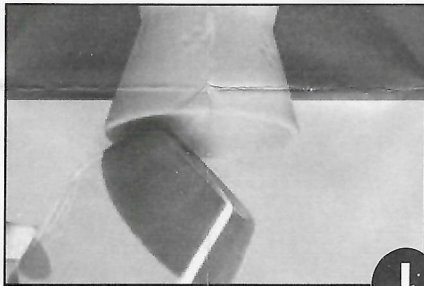

Carefully follow the steps below to properly set up and care for your Candle Light Lava Lamp.

CONTENTS LIST

1 STEP

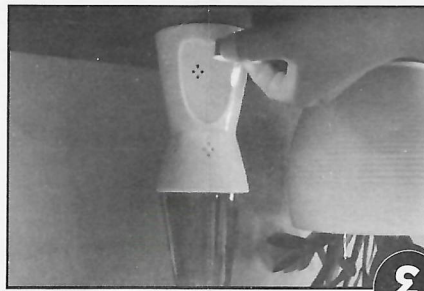

ASSEMBLE LAVA LAMP

Product is fragile, so be sure to position the ceramic base on a flat, level surface. Carefully set the globe into the base. Lastly, place cap atop the globe.

3 STEP

PLACE CANDLE IN PRODUCT

Once lit, carefully insert the tea light candle into the opening at the bottom of the base, nesting in the circular indent for proper positioning.

4 STEP

SIT BACK AND ENJOY

Lava will not flow immediately. So allow some time for the candle heat to warm the Lava and have it fully flow. Each candle will provide 4+ hours of use.

IMPORTANT SAFETY STEPS

⚠️ WARNING: TO PREVENT FIRE AND SERIOUS INJURY

Only use tealight candles. Never leave a burning candle unattended. Keep out of reach of children and pets. Never burn a candle on or near anything that can catch fire. Keep away from drafts and vibrations. Container will be hot when candle is lit.

FIRST AID

- For ingestion: Seek medical attention.
- For direct contact to eyes: Flush open eye with a direct stream of water for 15 minutes and then seek medical attention.
- For direct skin contact: Clean the affected area thoroughly with soap and water. Remove and wash contaminated clothing immediately. If irritation occurs, then seek medical attention.
- Although our products are non-hazardous, should you need specific material or health information, call Consumer Service (during regular business hours) at 1-800-336-5282. After business hours, contact Rocky Mountain Poison and Drug Center at 303-739-1110, or visit their website at www.rmpdc.org or contact your local poison center.

CLEAN UP INSTRUCTIONS FOR ACCIDENTAL BREAKAGE:

- If the product breaks, it is not harmful if it is handled properly.
- Wear rubber gloves during the clean-up process to protect and prevent injuries, cuts, and skin irritation.
- Carefully pick up and dispose of broken glass and ceramic shards. Use disposable towels to soak up excess liquid (you may use water to aid in clean up because the liquid is water-soluble).
- Thoroughly clean products soiled by the liquid. After liquid has been cleaned up, a commercial cleaning detergent may be used to deep-clean the area.
- For carpet: Blot up spilled material with an absorbent, disposable cloth. Follow cleaning directions from your carpet manufacturer.
- For floors: Wipe with disposable cloth and clean with floor cleaning detergent.

While the ceramic base and cap, and glass globe are strong and heavy-duty, extra care is encouraged, as the product could break if mishandled. SCHYLLING INC. IS NOT RESPONSIBLE FOR DAMAGE CAUSED BY PRODUCT BREAKAGE.

HELPFUL TIPS AND TRICKS

FIRST TIME USE

- Be patient. It will take 1-2 hours for LAVA® to flow after candle is placed.
- As the LAVA® begins to flow, it will form pillar shapes. This is normal.
- The more often you run your LAVA® Lamp, the quicker the start-up time will be.

IF LAVA IS NOT FLOWING

- There is a metal coil inside every LAVA® Lamp's globe. When laying flat at the bottom of the globe, it distributes heat, allowing the LAVA® to properly flow.
- If the coil is not flat at the bottom of the globe, GENTLY swirl the globe and the coil should drop.

CLOUDY LAVA® LAMP

- If your LAVA® Lamp's globe is cloudy, allow it to sit at room temperature for about 8 hours.
- Run your LAVA® Lamp until you notice motion within the globe. Remove all heat elements and allow the globe to cool again.
- Once the globe cools, run your LAVA® Lamp again for 4 hours. This should result in a clear lamp.
- If your LAVA® Lamp is still cloudy, please call Customer Service at 1-800-336-5282 or e-mail Orders@lavalamp.com.

KEEP LAVA® LAMP FLOWING

- Do not loosen or remove the cap on the globe. Breaking the seal will ruin your lamp and it will also void your warranty.
- Do not intentionally shake or drop your LAVA® Lamp. This may cause permanent damage. If this accidentally happens, remove from heat and let sit undisturbed for 24 hours.
- Do not place lamp in direct sunlight as colors will fade.
- Do not store or operate in extreme cold or heat, as this will negatively affect the lamp's functionality.
