Your Prescription for Crystal Clear Water®

PREMIUM CLOSING KIT

Make next season's pool opening a breeze! Our winter closing kit contains all of the chemicals you need to keep your pool water clear and sparkling, even through the harshest of winters.

DIRECTIONS FOR USE

Before adding any chemicals to your pool, be sure that your pool filter is operating. Add the contents of your Winterizing Chemical Kit by following the directions below. When the products in this kit are used in conjunction with each other, this kit will treat pools up to 45,000 gallons. Prepare your pool for winterizing by removing all debris from pool by skimming the surface, running the filter and vacuuming foreign particles from pool bottom. Pour entire contents of Winter Stain into the pool water by dispersing around perimeter of pool. Allow to circulate. Superchlorinate the pool with Shock X-Tra to a level of 5 to 10 ppm (parts per million) while filter is operating. Allow to circulate. Check pH and adjust. Add AlkaPlus Powder to the pool by walking around the edge of the pool. Contents should be spread over a large area. Allow to circulate. Apply Winterizing Powder according to label directions. Allow water to circulate for 3 hours, then shut off filter. Punch out all 8 holes as indicated on the winter floater and place in pool with long side up (cap side down). Drain any water from filter, piping and chlorinator in accordance with manufacturer's directions to prevent freezing. Disconnect all electrical outlets. Cover pool with a suitable winter pool cover after all winter maintenance is completed. Refer to individual product labels for additional information and precautions.
